

Data Analytics Bootcamp

Data Analytics Bootcamp – Cohort 9
2023 February 13

Fundamental Queries I

- SELECT Column
- FROM Table
- WHERE Filter
- ORDER BY Arranging
- LIMIT View

Syntax Guide

SELECT
 [ALIAS.column]
 , [ALIAS.column2]
 , ...
FROM
 [table ALIAS]
WHERE
 [column] [condition]
ORDER BY
 [column] [ASC/DESC]
LIMIT
 [number of rows]

Operators
Inequalities

<, >, >=, <=, <>

Ex: date > DATE('2021-01-01')

Text

ate after jan 1, 2021

operators

LIKE, IS, NOT

% for wildcard in LIKE

Ex: text LIKE '%ext'

Specific Values

ext ends with 'ext'

BETWEEN, IN

Ex: values IN ('a','b','c')

alue = a or b or c

Data Analytics Bootcamp

1. Get the daily positivity rate for each region. Show data only for October 20, 2020 – October 25, 2020 and order results by date then by region name.

$\text{positivity rate} = \text{total cases} / \text{total tests}$

#	Question/Task	Query/Answer
1	Which table do I get the data from ?	bigquery-public-data.covid19_italy.data_by_region
2	Which columns do I need to select . Show any relevant calculations as well as intended output column name if applicable (i.e. column1 + column2 AS added_columns)	date,total_confirmed_cases,tests_performed,region_code,region_name
3	Do I need to use any filter?	YES
4	If #3 is yes, what filters do I need?	Date(October 20, 2020-October 25, 2020)
5	Do I need to arrange my dataset? Which column? In ascending or descending order?	ORDER BY date ASC, region_code ASC
6	Do I need to limit the results of my dataset? If so, to how many rows?	BETWEEN October 20, 2020 AND October 25, 2020
7	Show the query to get the data needed. You can type, copy paste, or paste an image.	<pre> SELECT JOM.date , JOM.region_name , JOM.region_code , JOM.total_confirmed_cases/JOM.tests_performed AS daily_positivity_rate FROM bigquery-public-data.covid19_italy.data_by_region JOM WHERE DATE(JOM.date) BETWEEN DATE('2020-10-20') AND DATE ('2020-10-25') ORDER BY </pre>

Data Analytics Bootcamp

		JOM.date ASC, JOM.region_code ASC;																																								
8	Show a screenshot of the output. No need to show everything, just a sample will do.	<table><tr><th>Row</th><th>date ▾</th><th>region_name ▾</th><th>region_code ▾</th><th>daily_positivity_rate ▾</th></tr><tr><td>1</td><td>2020-10-20 17:00:00 UTC</td><td>Piemonte</td><td>1</td><td>0.052528498913...</td></tr><tr><td>2</td><td>2020-10-20 17:00:00 UTC</td><td>Umbria</td><td>10</td><td>0.019725474582...</td></tr><tr><td>3</td><td>2020-10-20 17:00:00 UTC</td><td>Marche</td><td>11</td><td>0.033659517145...</td></tr><tr><td>4</td><td>2020-10-20 17:00:00 UTC</td><td>Lazio</td><td>12</td><td>0.022911772251...</td></tr><tr><td>5</td><td>2020-10-20 17:00:00 UTC</td><td>Abruzzo</td><td>13</td><td>0.026130564842...</td></tr><tr><td>6</td><td>2020-10-20 17:00:00 UTC</td><td>Molise</td><td>14</td><td>0.018348953929...</td></tr><tr><td>7</td><td>2020-10-20 17:00:00 UTC</td><td>Campania</td><td>15</td><td>0.036401562818...</td></tr></table>	Row	date ▾	region_name ▾	region_code ▾	daily_positivity_rate ▾	1	2020-10-20 17:00:00 UTC	Piemonte	1	0.052528498913...	2	2020-10-20 17:00:00 UTC	Umbria	10	0.019725474582...	3	2020-10-20 17:00:00 UTC	Marche	11	0.033659517145...	4	2020-10-20 17:00:00 UTC	Lazio	12	0.022911772251...	5	2020-10-20 17:00:00 UTC	Abruzzo	13	0.026130564842...	6	2020-10-20 17:00:00 UTC	Molise	14	0.018348953929...	7	2020-10-20 17:00:00 UTC	Campania	15	0.036401562818...

Data Analytics Bootcamp

II. From your answer in I (i.e. using the same columns and conditions), which region and date registered the highest positivity rate? Adjust your query accordingly

#	Question/Task	Query/Answer
1	Which table do I get the data from?	bigquery-public-data.covid19_italy.data_by_region
2	Which columns do I need to select. Show any relevant calculations as well as intended output column name if applicable (i.e. column1 + column2 AS added_columns)	date,total_confirmed_cases,tests_performed,region_code,region_name
3	Do I need to use any filter?	YES
4	If #3 is yes, what filters do I need?	Date(October 20, 2020-October 25, 2020)
5	Do I need to arrange my dataset? Which column? In ascending or descending order?	ORDER BY date ASC, region_code ASC
6	Do I need to limit the results of my dataset? If so, to how many rows?	highest_daily_positivity_rate
7	Show the query to get the data needed. You can type, copy paste, or paste an image.	<pre>SELECT JOM.date , JOM.region_name , JOM.region_code , JOM.total_confirmed_cases/JOM.tests_performed AS daily_positivity_rate FROM bigquery-public- data.covid19_italy.data_by_region JOM WHERE DATE(JOM.date) BETWEEN DATE('2020-10-20') AND DATE ('2020-10-25') ORDER BY daily_positivity_rate ASC LIMIT 1</pre>

V		date ▼	region_name ▼	region_code ▼	daily_positivity_rate
1	2020-10-20 17:00:00 UTC	Calabria	18	0.012208487845...
